

What is Data Extraction?

Our data extraction solution is designed to make business simpler and more efficient for you. We use extractor technology to connect your accounting system to our e3 [customer interface]. This means that we can automatically pull your ledger data into our systems for processing on a regular basis.

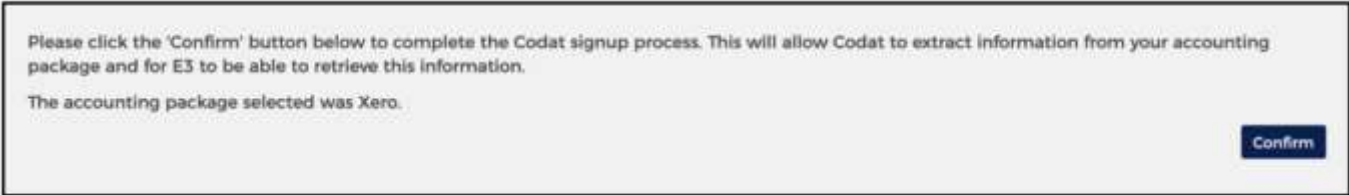

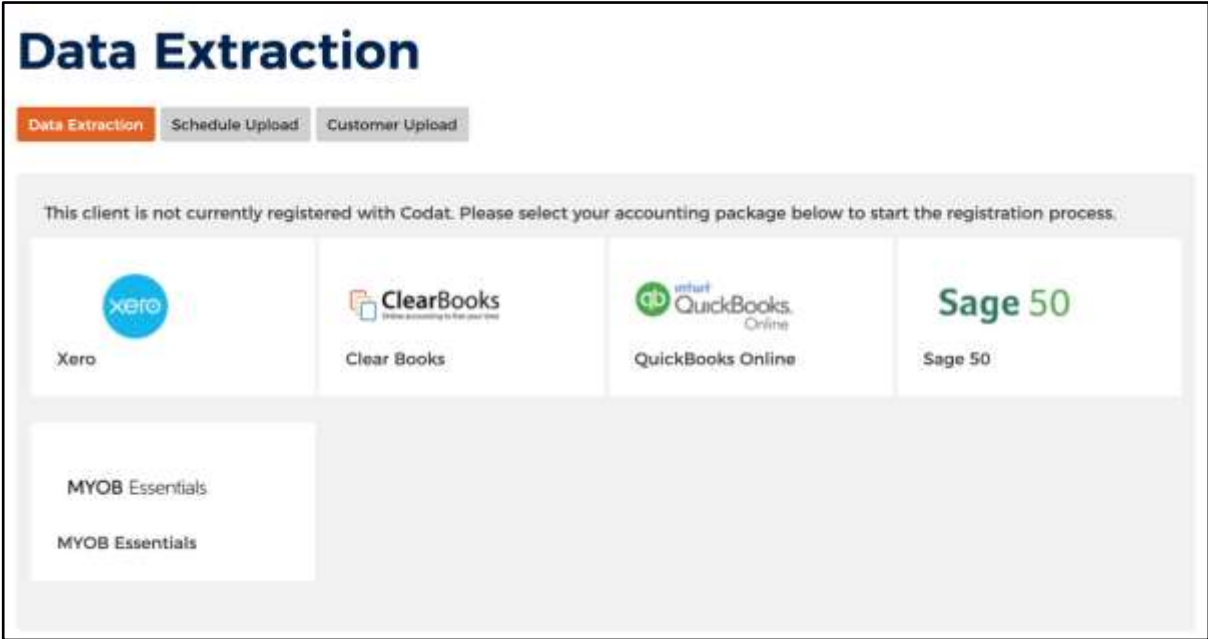

How Do I Connect?

You'll need to start by linking your accounting system. This can be done by logging into e3/customer interface (you can include a link for this) in the usual way.

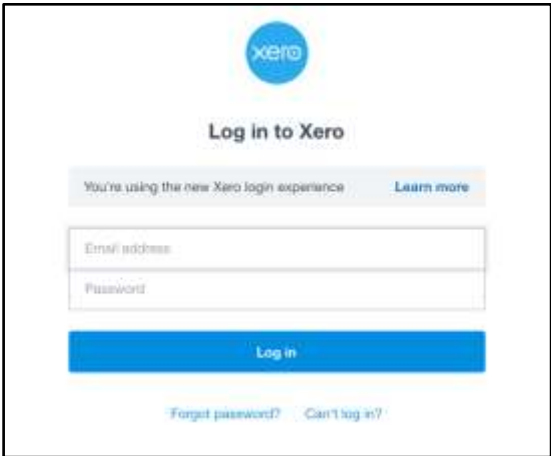

Once you're logged in, click on the **Data Extraction** icon in the left-hand menu.

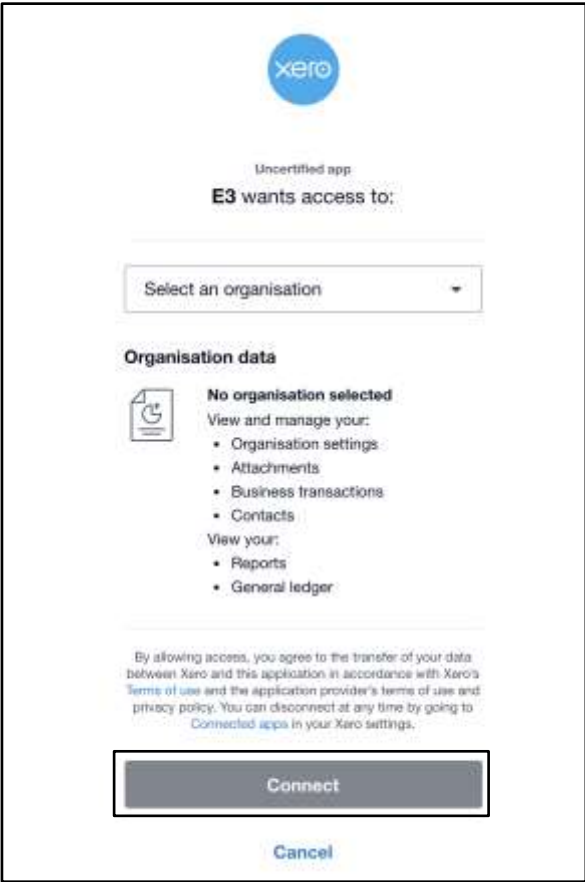

Click on the icon for the accounting package that you use (i.e., Xero) then click **confirm**.

You will then be redirected to the login page of their accounting system where they will be required to log in with their usual details.

Click **connect** on the page that follows.

You will then be redirected back to e3/customer interface where the extraction of customer data will begin.
